

ClassCAD

Full Feature List

CAD features

- NURBS-based 3D kernel for operations on solids: SMLib Library from Solid Modeling Solutions
- typical CAD operations (Boolean operations, Slice, Extrude, etc.)
- handling of solid bodies
- handling of assemblies, including inheritance mechanisms
- import/export: neutral BRep formats (STEP, IGES) or SAT; IFC (Industry Foundation Class), DXF via OpenDesign Library
- import/export: with some limitations: native models from different CAD systems
- service functions that can be used within the ClassCAD language: >1000 (CAD, Math, Strings etc.)
- upgradeable 2D sketching abilities
- constraints in 2D sketches and 3D assembly files; Constraint library of LEDAS Ltd.

Interaction features

- application specific interactions in 2D/3D
- viewing and selection mechanisms

Programming features

- own scripting language with runtime compiler and IDE (Integrated Development Environment) based on Eclipse
- application neutral interpreter classes
- development of libraries of interpreter classes with application specific knowledge
- efficient programming in the IDE with powerful debugging capabilities

Presentation features

- GUI development with Windows Presentation Framework (WPF); MS Expression Blend Tool
- WPF allows for the separation of GUI and application development
- applications can integrate a ClassCAD view as a component with an arbitrary GUI that controls the visualization, or with a ClassCAD end user GUI developed in WPF
- the ClassCAD WPF control library already provides GUI components with defined communication abilities with ClassCAD

In order to find out, if ClassCAD fits your specific needs, please contact our experts and we can assess in detail if ClassCAD is the right product for you!

We're always interested in new challenges and are happy to help you solve your CAD/CAM specific issues!
